PROFESSIONAL SUMMARY

Computer Science (AI specialization) student at Amrita Vishwa Vidyapeetham with hands-on experience building applied AI systems, LLM applications, RAG pipelines, and machine learning solutions using Python, PyTorch, LangChain, and FastAPI. Strong foundations in data structures, algorithms, and system design fundamentals, with experience developing AI agents, transformer-based applications, and scalable API-driven solutions. Passionate about building production-ready AI systems by combining machine learning, software engineering, and modern LLM technologies to solve real-world problems.

EDUCATION

Degree	Year Completed
Amrita Vishwa Vidyapeetham Grade: 85%	2028
Degree	Year Completed
Sri Chaitanya Junior College Grade: 90.2%	2024

WORK EXPERIENCE

Full-Stack Developer — Internship	April 2026 – Present
Viyatus Technologies Private Limited	Hyderabad(Hybrid)
- Reduced page load latency on the production dashboard by re-architecting Angular components and optimizing rendering logic for a Java Spring Boot-backed application. - Shipped 3 production features in 2 months by building and validating REST API endpoints in Spring Boot with MongoDB integration through a Bitbucket CI/CD pipeline, collaborating with stakeholders to translate requirements into specs. - Improved team alignment on infrastructure decisions by documenting architecture choices using Architecture Decision Records (ADRs), driving consistency across monitoring and operations. - Maintained 95%+ uptime on hybrid deployment by implementing proactive monitoring and rapid incident response, improving system reliability and availability.	

PROJECTS

Enterprise Multi-Agent AI Workflow Automation Platform	February 2026–June 2026
- Improved complex task automation efficiency by 60% by building a multi-agent AI orchestration system using LangGraph, LangChain, and OpenAI APIs with specialized planning, execution, and evaluation agents. - Increased response accuracy by 35% by implementing Retrieval-Augmented Generation (RAG), agent memory, and semantic retrieval pipelines using FAISS/ChromaDB vector databases. - Reduced unreliable LLM outputs by 40% by developing automated evaluation workflows with golden datasets, prompt testing, and LLM-as-judge evaluation techniques.	
Production RAG Knowledge Engine (Enterprise Document AI)	July 2026–October 2026
- Improved document question-answering accuracy by 45% by designing an enterprise RAG system with optimized chunking, embeddings, semantic search, and metadata filtering pipelines. - Reduced hallucinated responses by 35% by implementing retrieval evaluation, citation generation, and context-ranking strategies using LangChain and vector databases. - Decreased document search time by 70% by building a FastAPI-based AI knowledge platform with FAISS/ChromaDB indexing and scalable API deployment.	

TECHNICAL SKILLS

Languages | Python
AI/ML Frameworks | NumPy, Pandas, Matplotlib, scikit-learn, PyTorch, CNNs, Hugging Face Transformers
LLM & Applied AI | OpenAI API, Anthropic API, Prompt Engineering, RAG, FAISS, ChromaDB, LangChain, LangGraph, Function Calling, MCP, LLM Evaluation
Developer Tools & Deployment | Git, GitHub, VS Code, FastAPI, Docker, AWS, GCP
Concepts | Data Structures & Algorithms, Object-Oriented Programming, System Design Fundamentals, Load Balancing, Caching, Database Fundamentals, API Design
